

# DIVA PORTOFOLIO

# HELLO!

## About me

- Saya merupakan mahasiswa DKV new media dari Bina Nusantara University. Memiliki ketertarikan dalam bidang graphic design, dan illustrator.
- Terampil dalam menggunakan Adobe photoshop, adobe illustrator, dan medibang. Saya bisa bekerja secara individual maupun berkelompok dan senang dalam mengeksplorasi hal baru.

## Education

Bina Nusantara University (2021 - Present)

- Visual communication design major

SMA KARTIKA X-1 (2018 - 2021)

- Science Major

## Skills

# DIVA

# House Plant Booklet

Layouting

Sebuah project tugas kuliah  
membuat booklet mengenai  
menanam tanaman didalam  
ruangan

App Used

# Mockup booklet

**ABOUT**

**02**

A houseplant is a plant that is grown indoors in places such as residences and offices, mainly for decorative purposes, but studies have also shown them to have positive psychological effects. They also help with indoor air purification, since some species, and the soil-dwelling microbes associated with them, reduce indoor air pollution by absorbing volatile organic compounds including benzene, formaldehyde, and dichlorodifluoromethane.

Common houseplants are usually tropical or semi-tropical epiphytes, succulents or cacti. Houseplants need the correct moisture, light levels, soil mixture, temperature, and humidity. Without these conditions most house plants can die easily. As well, houseplants need the proper fertilizer and correct-sized pots.

**“Working With plant**  
will teach you all  
other social commitments  
in a soothing way...”

**The origin of houseplants**

Most houseplants are tropical evergreen species that adapted to survive in a tropical climate which ranges from 15 °C to 25 °C year-round. The natural range of plant species, the varieties of which are used as houseplants, allows important conclusions to be drawn about their husbandry requirements.

Plants from tropical rainforests do not need to rest, unlike those from temperate zones. As a rule, their humidity requirements are particularly high. A more precise knowledge of the natural vegetation area of a plant is therefore helpful in maintenance.

The majority of the plant species kept as houseplants come from the area of the tropical rainforest and the adjacent areas. The length of the day is constantly around twelve hours. Precipitation is evenly distributed over the year.

The average daily temperature depends on the respective altitude. In tropical forests that are not at altitudes above 600 meters, it is usually evenly between 24 and 28 degrees Celsius all year round. In higher-lying rainforests, the so-called tropical mountain forest, it sometimes only averages 10 degrees Celsius.

**Tropical Rainforest**

# ADS Poster

Poster

- Poster iklan mie sedap cup rasa korean spicy chicken yang memiliki rasa pedas membara.

App Used

Ps

# Mencari Kucing Calico Jantan

Motion Infographic

Karya ini adalah project kelompok tugas kuliah. Pada project ini, saya bertugas untuk membuat animasi dan background papan tulis.

Video infographic bisa diakses melalui barcode berikut: (0:49-2:25)

App Used

Character Sketches

Progress 3D

# Picnic

## 3D Modelling

Membuat karakter 3d dengan tema liburan musim panas. Pada karya ini, saya menggunakan low poly 3d

App Used

# Where's My Pond?

## Riso Printing

Karya ini menceritakan tentang bagaimana lingkungan kita sudah tercemar oleh limbah plastik dan minyak. Pencemaran tersebut membuat habitat hewan menjadi tidak layak untuk digunakan.

App Used

thank you
